

Students at our Sioux City Community Elementary Schools are actively learning science by using kits sent from Full Option Science System (FOSS) and Science and Technology for Children (STC) companies. These kits provide a hands-on learning approach to science, while incorporating writing by keeping a science lab book and reading nonfiction books on the kits' topics. Students have an opportunity to learn about their surroundings by investigating topics such as pebbles, sand, and silt, living organisms in aquariums and terrariums, or solids and liquids. Science has become the students' favorite subject in many classrooms, due to the exciting way it is being taught and learned.
