

# **Using the Reports feature with CPS:**

## **The key for Differentiated Instruction**

### **Types of reports:**

- 1. Instructor Summary-** A short report that tells you the students name, number correct out of total questions given, total %
- 2. Study Guide-**A long report, probably something that has great information, but probably shouldn't print this report. It breaks down each question by each student and tells you the correct answer, and how they answered.
- 3. Study Guide Incorrect Answers-** A short report. It is basically the same as the report mentioned in number 2, but it only pulls the students incorrect answers for each question.
- 4. Study Guide Class Summary-** A shorter report. Again very similar to the report mentioned in number 2. However, this report does not show the actual question. It shows how each student did, gives you total % correct, and if a student missed a question, it shows the number of the question they missed, how they answered, and what the correct answer should be.

**5. Question report-** A shorter report that takes each question individually and provides all possible answers and how each student did answer. The report also shows you what the actual question was and the correct answer.

**6. Response Report-** A short report that shows that does not break down the quiz individually, but will show you how your class answered as a whole.

**7. Item Analysis-** A short report that shows a class summary (by percentage) for each question's response choices.
